#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Gravel et al. Gravel et al teach a medication delivery pen and a blood glucose monitor that are integrated into a housing. See Figures 4 and 5. A test strip is inserted into a chamber through a test strip interface on the side of the housing. See col. 4, II. 24-31. Electronics such as a microprocessor are shared between the glucose monitor and the delivery means to eliminate redundant components. See col. 4, II. 32-47. A single display presents data from both the glucose monitor and the delivery means. See col. 4, II. 47-49.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/960,463

Art Unit: 3736

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gravel et al as applied to claim 1 above, and further in view of Markart et al. Gravel et al teach a medication delivery pen and a blood glucose monitor as recited for claim 1. While teaching that the device uses well-known electrochemical or reflectance techniques to analyze a test strip, the reference does not disclose the specific features of an LED, its corresponding chamber or a protrusion member. Markart et al teach a portable test strip analysis system. A protrusion member (24) is biased towards the test strip to position it exactly. See col. 5, Il. 20-31 and Figure 4. An LED is positioned to emit light through a chamber and towards a test field. See col. 6, Il. 14-23. Evaluation electronics (control panel) generate a measurement signal from a detector signal. See col. 6, Il. 51-62. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include in the device of Gravel et al the testing elements of Markart et al since Gravel et al require testing elements, which can include reflectance measurement elements, and Markart et al teach details of such an arrangement.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David J. McCrosky whose telephone number is 703-305-1331. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Max F. Hindenburg can be reached on 703-308-3130. The fax phone numbers for the organization where this application or proceeding is assigned are 703-

Application/Control Number: 09/960,463 Page 4
